AB **Chemiluminescent** compns. which comprise an oxalate and a fluorescent material in an appropriate solvent, the compns. being mixed with a composition including hydrogen peroxide to induce **chemiluminescence** are described in which the solvent includes an acetyl citrate ester. The solvent may contain addnl. organic materials such as benzoates. Di-Bu phthalate, which is used in the conventional solvent, is suspected to be an endocrine-disrupting chemical, so using the solvent specified in the present invention improves the degree of safety to humans. The hydrogen peroxide-containing compns. preferably use solvents including t-butanol and  $\geq 1$  (di)ethylene glycol monoalkyl ether acetate.

AB The hazardous materials regulations under the Federal Hazardous Materials Transportation Act are revised based on the United Nations recommendations on the transport of dangerous goods. The regulations cover the classification of materials, packaging requirements, and package marking, labeling, and shipping documentation, as well as transportation modes and handling, and incident reporting. Performance-oriented stds. are adopted for packaging for bulk and nonbulk transportation, and SI units of measurement generally replace US customary units. Hazardous material descriptions and proper shipping names are tabulated together with hazard class, identification nos., packing group, label required, special provisions, packaging authorizations, quantity limitations, and vessel stowage requirements.
